List of MQL5 Functions

All MQL5 functions in alphabetical order.

| Function | Action | Section |
|--------------------------|---|------------------------|
| <u>AccountInfoDouble</u> | Returns a value of double type of the corresponding account property | Account Information |
| AccountInfoInteger | Returns a value of integer type (bool, int or long) of the corresponding account property | Account Information |
| AccountInfoString | Returns a value string type corresponding account property | |
| acos | Returns the arc cosine of x in radians | Math Functions |
| <u>Alert</u> | Displays a message in a separate window | Common Functions |
| <u>ArrayBsearch</u> | Searches for a specified value in a multidimensional numeric array sorted ascending | |
| <u>ArrayCompare</u> | Returns the result of comparing two arrays of simple types or custom structures without complex objects | |
| <u>ArrayCopy</u> | Copies one array into another | Array Functions |
| <u>ArrayFill</u> | Fills an array with the specified value | Array Functions |
| <u>ArrayFree</u> | Frees up buffer of any dynamic array and sets the size of the zero dimension in 0. | |
| <u>ArrayGetAsSeries</u> | Checks direction of array indexing | Array Functions |
| <u>ArrayInitialize</u> | Sets all elements of a numeric array into a single value | |
| <u>ArraylsDynamic</u> | Checks whether an array is dynamic | Array Functions |
| <u>ArraylsSeries</u> | Checks whether an array is a timeseries | Array Functions |

| Function | Action | Section |
|-------------------------|---|---|
| <u>ArrayMaximum</u> | Searches for the largest element in the first dimension of a multidimensional numeric array | |
| <u>ArrayMinimum</u> | Searches for the lowest element in the first dimension of a multidimensional numeric array | |
| <u>ArrayRange</u> | Returns the number of elements in the specified dimension of the array | |
| <u>ArrayResize</u> | Sets the new size in the first dimension of the array | Array Functions |
| <u>ArraySetAsSeries</u> | Sets the direction of array indexing | Array Functions |
| <u>ArraySize</u> | Returns the number of elements in the array | Array Functions |
| <u>ArraySort</u> | Sorting of numeric arrays by the first dimension | Array Functions |
| <u>ArrayPrint</u> | Prints an array of a simple type or a simple structure into journal | Array Functions |
| ArrayInsert | Inserts the specified number of elements from a source array to a receiving one starting from a specified index | Array Functions |
| <u>ArrayRemove</u> | Removes the specified number of elements from the array starting with a specified index | |
| <u>ArrayReverse</u> | Reverses the specified number of elements in the array starting with a specified index | Array Functions |
| <u>ArraySwap</u> | Swaps the contents of two dynamic arrays of the same type | Array Functions |
| <u>asin</u> | Returns the arc sine of x in radians | Math Functions |
| <u>atan</u> | Returns the arc tangent of x in radians | Math Functions |
| <u>Bars</u> | Returns the number of bars the history for a specified symbol and period | Timeseries and Indicators Access |

| Function | Action | Section |
|------------------------------------|---|---|
| <u>BarsCalculated</u> | Returns the number of calculated data in an indicator buffer or -1 in the case of error (data hasn't been calculated yet) | Timeseries and Indicators Access |
| <u>CalendarCountryById</u> | Get a country description by its ID | Economic Calendar |
| <u>CalendarEventById</u> | Get an event description by its ID | Economic Calendar |
| <u>CalendarValueById</u> | Get an event value description by its ID | Economic Calendar |
| CalendarCountries | Get the array of country names available in the calendar | Economic Calendar |
| <u>CalendarEventByCountry</u> | Get the array of descriptions of all events available in the calendar by a specified country code | Economic Calendar |
| <u>CalendarEventByCurrency</u> | Get the array of descriptions of all events available in the calendar by a specified currency | Economic Calendar |
| <u>CalendarValueHistoryByEvent</u> | Get the array of values for all events in a specified time range by an event ID | Economic Calendar |
| <u>CalendarValueHistory</u> | Get the array of values for all events in a specified time range with the ability to sort by country and/or currency | Economic Calendar |
| <u>CalendarValueLastByEvent</u> | Get the array of event values by its ID since the calendar database status with a specified change_id | Economic Calendar |
| <u>CalendarValueLast</u> | Get the array of values for all events with the ability to sort by country and/or currency since the calendar database status with a specified change_id | Economic Calendar |
| <u>ceil</u> | Returns integer numeric value closest from above | Math Functions |
| <u>CharArrayToString</u> | Converting symbol code (ansi) into one-symbol array | Conversion Functions |
| <u>ChartApplyTemplate</u> | Applies a specific template from a specified file to the chart | <u>Chart</u> <u>Operations</u> |
| <u>ChartClose</u> | Closes the specified chart | Chart Operations |

| Function | Action | Section |
|-----------------------------|---|-----------------------------------|
| <u>ChartFirst</u> | Returns the ID of the first chart of the client terminal | Chart Operations |
| <u>ChartGetDouble</u> | Returns the double value property of the specified chart | <u>Chart</u> <u>Operations</u> |
| ChartGetInteger | Returns the integer value property of the specified chart | Chart Operations |
| ChartGetString | Returns the string value property of the specified chart | <u>Chart</u> <u>Operations</u> |
| <u>ChartID</u> | Returns the ID of the current chart | Chart Operations |
| ChartIndicatorAdd | Adds an indicator with the specified handle into a specified chart window | <u>Chart</u> <u>Operations</u> |
| <u>ChartIndicatorDelete</u> | Removes an indicator with a specified name from the specified chart window | <u>Chart</u> <u>Operations</u> |
| <u>ChartIndicatorGet</u> | Returns the handle of the indicator with the specified short name in the specified chart window | Chart Operations |
| <u>ChartIndicatorName</u> | Returns the short name of the indicator by the number in the indicators list on the specified chart window | <u>Chart</u> <u>Operations</u> |
| <u>ChartIndicatorsTotal</u> | Returns the number of all indicators applied to the specified chart window. | |
| <u>ChartNavigate</u> | Performs shift of the specified chart by the specified number of bars relative to the specified position in the chart | Chart Operations |
| <u>ChartNext</u> | Returns the chart ID of the chart next to the specified one | <u>Chart</u> <u>Operations</u> |
| <u>ChartOpen</u> | Opens a new chart with the specified symbol and period | Chart Operations |
| CharToString | Converting a symbol code into a one-character string | Conversion Functions |
| <u>ChartPeriod</u> | Returns the period value of the specified chart | Chart Operations |
| <u>ChartPriceOnDropped</u> | Returns the price coordinate of the chart point, the Expert Advisor or script has been dropped to | <u>Chart</u> <u>Operations</u> |

| Function | Action | Section |
|-----------------------------|--|-----------------------------------|
| <u>ChartRedraw</u> | Calls a forced redrawing of a specified chart | <u>Chart</u> <u>Operations</u> |
| <u>ChartSaveTemplate</u> | Saves current chart settings in a template with a specified name | |
| <u>ChartScreenShot</u> | Provides a screenshot of the chart of its current state in a GIF, PNG or BMP format depending on specified extension | Chart Operations |
| <u>ChartSetDouble</u> | Sets the double value for a corresponding property of the specified chart | |
| <u>ChartSetInteger</u> | Sets the integer value (datetime, int, color, bool or char) for a corresponding property of the specified chart | Chart Operations |
| ChartSetString | Sets the string value for a corresponding property of the specified chart | |
| ChartSetSymbolPeriod | Changes the symbol value and a period of the specified chart | <u>Chart</u> <u>Operations</u> |
| ChartSymbol | Returns the symbol name of the specified chart | Chart Operations |
| <u>ChartTimeOnDropped</u> | Returns the time coordinate of the chart point, the Expert Advisor or script has been dropped to | Chart Operations |
| <u>ChartTimePriceToXY</u> | Converts the coordinates of a chart from the time/price representation to the X and Y coordinates | Chart Operations |
| ChartWindowFind | Returns the number of a subwindow where an indicator is drawn | Chart Operations |
| <u>ChartWindowOnDropped</u> | Returns the number (index) of the chart subwindow, the Expert Advisor or script has been dropped to | Chart Operations |
| <u>ChartXOnDropped</u> | Returns the X coordinate of the chart point, the Expert Advisor or script has been dropped to | Chart Operations |
| <u>ChartXYToTimePrice</u> | Converts the X and Y coordinates on a chart to the time and price values | Chart Operations |

| Function | Action | Section |
|--------------------------|--|-------------------------|
| <u>ChartYOnDropped</u> | Returns the Y coordinate of the chart point, the Expert Advisor or script has been dropped to | Chart Operations |
| <u>CheckPointer</u> | Returns the type of the object pointer | Common Functions |
| <u>CLBufferCreate</u> | Creates an OpenCL buffer | Working with OpenCL |
| <u>CLBufferFree</u> | Deletes an OpenCL buffer | Working with OpenCL |
| CLBufferRead | Reads an OpenCL buffer into an array | Working with OpenCL |
| <u>CLBufferWrite</u> | Writes an array into an OpenCL buffer | Working with OpenCL |
| CLContextCreate | Creates an OpenCL context | Working with OpenCL |
| <u>CLContextFree</u> | Removes an OpenCL context | Working with OpenCL |
| CLExecute | Runs an OpenCL program | Working with OpenCL |
| <u>CLGetDeviceInfo</u> | Receives device property from OpenCL driver | Working with OpenCL |
| CLGetInfoInteger | Returns the value of an integer property for an OpenCL object or device | Working with OpenCL |
| <u>CLHandleType</u> | Returns the type of an OpenCL handle as a value of the ENUM_OPENCL_HANDLE_TYPE enumeration | |
| <u>CLKernelCreate</u> | Creates an OpenCL start function | Working with OpenCL |
| <u>CLKernelFree</u> | Removes an OpenCL start function | Working with OpenCL |
| CLProgramCreate | Creates an OpenCL program from a source code | Working with OpenCL |
| <u>CLProgramFree</u> | Removes an OpenCL program | Working with OpenCL |
| CLSetKernelArg | Sets a parameter for the OpenCL function | Working with OpenCL |
| <u>CLSetKernelArgMem</u> | Sets an OpenCL buffer as a parameter of the OpenCL function | Working with OpenCL |
| ColorToARGB | Converting color type to uint type to receive ARGB representation of the color. | Conversion Functions |

| Function | Action | Section |
|-----------------------|---|---|
| ColorToString | Converting color value into string as "R,G,B" | Conversion Functions |
| <u>Comment</u> | Outputs a comment in the left top corner of the chart | Common Functions |
| <u>CopyBuffer</u> | Gets data of a specified buffer from a specified indicator into an array | Timeseries and Indicators Access |
| CopyClose | Gets history data on bar closing price for a specified symbol and period into an array | Timeseries and Indicators Access |
| CopyHigh | Gets history data on maximal bar price for a specified symbol and period into an array | Timeseries and Indicators Access |
| CopyLow | Gets history data on minimal bar price for a specified symbol and period into an array | Timeseries and Indicators Access |
| <u>CopyOpen</u> | Gets history data on bar opening price for a specified symbol and period into an array | Timeseries and Indicators Access |
| CopyRates | Gets history data of the Rates structure for a specified symbol and period into an array | Timeseries and Indicators Access |
| <u>CopyRealVolume</u> | Gets history data on trade volumes for a specified symbol and period into an array | |
| CopySpread | Gets history data on spreads for a specified symbol and period into an array | Timeseries and Indicators Access |
| CopyTicks | Gets ticks accumulated by the terminal for the current working session into an array | |
| <u>CopyTickVolume</u> | Gets history data on tick volumes for a specified symbol and period into an array | Timeseries and Indicators Access |
| <u>CopyTime</u> | Gets history data on bar opening time for a specified symbol and period into an array | Timeseries and Indicators Access |

| Function | Action | Section |
|----------------------------------|--|---------------------------------|
| cos | Returns the cosine of a number | Math Functions |
| <u>CryptDecode</u> | Performs the inverse transformation of the data from array | Common Functions |
| CryptEncode | Transforms the data from array with the specified method | Common Functions |
| <u>CustomSymbolCreate</u> | Create a custom symbol with the specified name in the specified group | <u>Custom</u> <u>Symbols</u> |
| <u>CustomSymbolDelete</u> | Delete a custom symbol with the specified name | <u>Custom</u> <u>Symbols</u> |
| CustomSymbolSetInteger | Set the integer type property value for a custom symbol | <u>Custom</u> <u>Symbols</u> |
| CustomSymbolSetDouble | Set the real type property value for a custom symbol | <u>Custom</u> <u>Symbols</u> |
| CustomSymbolSetString | Set the string type property value for a custom symbol | <u>Custom</u> <u>Symbols</u> |
| <u>CustomSymbolSetMarginRate</u> | Set the margin rates depending on the order type and direction for a custom symbol | <u>Custom</u> <u>Symbols</u> |
| CustomSymbolSetSessionQuote | Set the start and end time of the specified quotation session for the specified symbol and week day | <u>Custom</u> <u>Symbols</u> |
| CustomSymbolSetSessionTrade | Set the start and end time of the specified trading session for the specified symbol and week day | <u>Custom</u> <u>Symbols</u> |
| CustomRatesDelete | Delete all bars from the price history of the custom symbol in the specified time interval | <u>Custom</u> <u>Symbols</u> |
| CustomRatesReplace | Fully replace the price history of the custom symbol within the specified time interval with the data from the MqlRates type array | <u>Custom</u> <u>Symbols</u> |
| <u>CustomRatesUpdate</u> | Add missing bars to the custom symbol history and replace existing data with the ones from the MqlRates type array | Custom Symbols |
| CustomTicksAdd | Adds data from an array of the MqlTick type to the price history of a custom symbol. The custom symbol must be | <u>Custom</u> <u>Symbols</u> |

| Function | Action | Section |
|----------------------------|---|---------------------------------|
| | selected in the Market Watch window | |
| <u>CustomTicksDelete</u> | Delete all ticks from the price history of the custom symbol in the specified time interval | <u>Custom</u> <u>Symbols</u> |
| <u>CustomTicksReplace</u> | Fully replace the price history of the custom symbol within the specified time interval with the data from the MqlTick type array | <u>Custom</u> <u>Symbols</u> |
| <u>CustomBookAdd</u> | Passes the status of the Depth of Market for a custom symbol | <u>Custom</u> <u>Symbols</u> |
| <u>DatabaseOpen</u> | Opens or creates a database in a specified file | Working with databases |
| <u>DatabaseClose</u> | Closes a database | Working with databases |
| <u>DatabaseImport</u> | Imports data from a file into a table | Working with databases |
| <u>DatabaseExport</u> | Exports a table or an SQL request execution result to a CSV file | Working with databases |
| <u>DatabasePrint</u> | Prints a table or an SQL request execution result in the Experts journal | Working with databases |
| <u>DatabaseTableExists</u> | Checks the presence of the table in a database | Working with databases |
| <u>DatabaseExecute</u> | Executes a request to a specified database | Working with databases |
| <u>DatabasePrepare</u> | Creates a handle of a request, which can then be executed using DatabaseRead() | with |
| <u>DatabaseReset</u> | Resets a request, like after calling <u>DatabasePrepare()</u> | Working with databases |
| <u>DatabaseBind</u> | Sets a parameter value in a request | Working with databases |
| <u>DatabaseBindArray</u> | Sets an array as a parameter value | Working with databases |

| Function | Action | Section |
|------------------------------------|--|------------------------------|
| <u>DatabaseRead</u> | Moves to the next entry as a result of a request | Working with databases |
| <u>DatabaseReadBind</u> | Moves to the next record and reads data into the structure from it | Working with databases |
| <u>DatabaseFinalize</u> | Removes a request created in DatabasePrepare() | Working with databases |
| <u>DatabaseTransactionBegin</u> | Starts transaction execution | Working with databases |
| <u>DatabaseTransactionCommit</u> | Completes transaction execution | Working with databases |
| <u>DatabaseTransactionRollback</u> | Rolls back transactions | Working with databases |
| <u>DatabaseColumnsCount</u> | Gets the number of fields in a request | Working with databases |
| <u>DatabaseColumnName</u> | Gets a field name by index | Working with databases |
| <u>DatabaseColumnType</u> | Gets a field type by index | Working with databases |
| <u>DatabaseColumnSize</u> | Gets a field size in bytes | Working with databases |
| <u>DatabaseColumnText</u> | Gets a field value as a string from the current record | Working with databases |
| <u>DatabaseColumnInteger</u> | Gets the int type value from the current record | Working with databases |
| DatabaseColumnLong | Gets the long type value from the current record | Working with databases |
| <u>DatabaseColumnDouble</u> | Gets the double type value from the current record | Working with databases |
| <u>DatabaseColumnBlob</u> | Gets a field value as an array from the current record | Working with databases |
| <u>DebugBreak</u> | Program breakpoint in debugging | Common Functions |

| Function | Action | Section |
|-----------------------------|--|-------------------------|
| <u>Digits</u> | Returns the number of decimal digits determining the accuracy of the price value of the current chart symbol | <u>Checkup</u> |
| <u>DoubleToString</u> | Converting a numeric value to a text line with a specified accuracy | |
| <u>DXContextCreate</u> | Creates a graphic context for rendering frames of a specified size | |
| <u>DXContextSetSize</u> | Changes a frame size of a graphic context created in DXContextCreate() | |
| <u>DXContextSetSize</u> | Gets a frame size of a graphic context created in DXContextCreate() | Working with DirectX |
| <u>DXContextClearColors</u> | Sets a specified color to all pixels for the rendering buffer | |
| <u>DXContextClearDepth</u> | Clears the depth buffer | Working with DirectX |
| <u>DXContextGetColors</u> | Gets an image of a specified size and offset from a graphic context | Working with DirectX |
| <u>DXContextGetDepth</u> | Gets the depth buffer of a rendered frame | Working with DirectX |
| <u>DXBufferCreate</u> | Creates a buffer of a specified type based on a data array | |
| <u>DXTextureCreate</u> | Creates a 2D texture out of a rectangle of a specified size cut from a passed image | Working with DirectX |
| <u>DXInputCreate</u> | Creates shader inputs | Working with DirectX |
| <u>DXInputSet</u> | Sets shader inputs | Working with DirectX |
| <u>DXShaderCreate</u> | Creates a shader of a specified type | Working with DirectX |
| <u>DXShaderSetLayout</u> | Sets vertex layout for the vertex shader | Working with DirectX |
| <u>DXShaderInputsSet</u> | Sets shader inputs | Working with DirectX |
| <u>DXShaderTexturesSet</u> | Sets shader textures | Working with DirectX |
| <u>DXDraw</u> | Renders the vertices of the vertex buffer set in | Working with DirectX |

| Function | Action | Section |
|---------------------------------|---|-------------------------|
| | DXBufferSet() | |
| <u>DXDrawIndexed</u> | Renders graphic primitives described by the index buffer from DXBufferSet() | Working with DirectX |
| <u>DXPrimiveTopologySet</u> | Sets the type of primitives for rendering using DXDrawIndexed() | Working with DirectX |
| <u>DXBufferSet</u> | Sets a buffer for the current rendering | Working with DirectX |
| <u>DXShaderSet</u> | Sets a shader for rendering | Working with DirectX |
| <u>DXHandleType</u> | Returns a handle type | Working with DirectX |
| <u>DXRelease</u> | Releases a handle | Working with DirectX |
| EnumToString | Converting an enumeration value of any type to string | Conversion Functions |
| <u>EventChartCustom</u> | Generates a custom event for the specified chart | Working with Events |
| <u>EventKillTimer</u> | Stops the generation of events by the timer in the current chart | Working with Events |
| <u>EventSetMillisecondTimer</u> | Launches event generator of the high-resolution timer with a period less than 1 second for the current chart | Working with Events |
| <u>EventSetTimer</u> | Starts the timer event generator with the specified periodicity for the current chart | |
| <u>exp</u> | Returns exponent of a number | Math Functions |
| <u>ExpertRemove</u> | Stops Expert Advisor and unloads it from the chart | Common Functions |
| <u>fabs</u> | Returns absolute value (modulus) of the specified numeric value | |
| <u>FileClose</u> | Closes a previously opened file | File Functions |
| <u>FileCopy</u> | Copies the original file from a local or shared folder to another file | File Functions |
| <u>FileDelete</u> | Deletes a specified file | File Functions |
| FileFindClose | Closes search handle | File Function |

| Function | Action | Section |
|-------------------------|---|-------------------|
| <u>FileFindFirst</u> | Starts the search of files in a directory in accordance with the specified filter | File Functions |
| <u>FileFindNext</u> | Continues the search started by the FileFindFirst() function | File Functions |
| <u>FileFlush</u> | Writes to a disk all data remaining in the input/output file buffer | File Functions |
| <u>FileGetInteger</u> | Gets an integer property of a file | File Functions |
| <u>FileIsEnding</u> | Defines the end of a file in the process of reading | File Functions |
| <u>FileIsExist</u> | Checks the existence of a file | File Functions |
| <u>FileIsLineEnding</u> | Defines the end of a line in a text file in the process of reading | File Functions |
| <u>FileMove</u> | Moves or renames a file | File Functions |
| <u>FileOpen</u> | Opens a file with a specified name and flag | File Functions |
| <u>FileReadArray</u> | Reads arrays of any type except for string from the file of the BIN type | |
| FileReadBool | Reads from the file of the CSV type a string from the current position till a delimiter (or till the end of a text line) and converts the read string to a value of bool type | |
| <u>FileReadDatetime</u> | Reads from the file of the CSV type a string of one of the formats: "YYYY.MM.DD HH:MM:SS", "YYYY.MM.DD" or "HH:MM:SS" - and converts it into a datetime value | File Functions |
| <u>FileReadDouble</u> | Reads a double value from the current position of the file pointer | File Functions |
| <u>FileReadFloat</u> | Reads a float value from the current position of the file pointer | File Functions |
| <u>FileReadInteger</u> | Reads int, short or char value from the current position of the file pointer | File Functions |

| Function | Action | Section |
|-------------------------|--|-------------------|
| FileReadLong | Reads a long type value from the current position of the file pointer | File Functions |
| <u>FileReadNumber</u> | Reads from the file of the CSV type a string from the current position till a delimiter (or til the end of a text line) and converts the read string into double value | File Functions |
| FileReadString | Reads a string from the current position of a file pointer from a file | File Functions |
| <u>FileReadStruct</u> | Reads the contents from a binary file into a structure passed as a parameter, from the current position of the file pointer | File Functions |
| <u>FileSeek</u> | Moves the position of the file pointer by a specified number of bytes relative to the specified position | File Functions |
| <u>FileSize</u> | Returns the size of a corresponding open file | File Functions |
| <u>FileTell</u> | Returns the current position of the file pointer of a corresponding open file | |
| <u>FileWrite</u> | Writes data to a file of CSV or TXT type | File Functions |
| <u>FileWriteArray</u> | Writes arrays of any type except for string into a file of BIN type | |
| <u>FileWriteDouble</u> | Writes value of the double type from the current position of a file pointer into a binary file | File Functions |
| <u>FileWriteFloat</u> | Writes value of the float type from the current position of a file pointer into a binary file | File Functions |
| <u>FileWriteInteger</u> | Writes value of the int type from the current position of a file pointer into a binary file | File Functions |
| FileWriteLong | Writes value of the long type from the current position of a file pointer into a binary file | File Functions |
| <u>FileWriteString</u> | Writes the value of a string parameter into a BIN or TXT | File Function |

| Function | Action | Section |
|------------------------|---|-----------------------------------|
| | file starting from the current position of the file pointer | |
| <u>FileWriteStruct</u> | Writes the contents of a structure passed as a parameter into a binary file, starting from the current position of the file pointer | File Functions |
| floor | Returns integer numeric value closest from below | Math Functions |
| fmax | Returns the maximal value of the two numeric values | Math Functions |
| fmin | Returns the minimal value of the two numeric values | Math Functions |
| fmod | Returns the real remainder after the division of two numbers | |
| <u>FolderClean</u> | Deletes all files in the specified folder | File Functions |
| <u>FolderCreate</u> | Creates a folder in the Files directory | File Functions |
| <u>FolderDelete</u> | Removes a selected directory. If the folder is not empty, then it can't be removed | |
| <u>FrameAdd</u> | Adds a frame with data | Working with Optimization Results |
| <u>FrameFilter</u> | Sets the frame reading filter and moves the pointer to the beginning | Working with Optimization Results |
| <u>FrameFirst</u> | Moves a pointer of frame reading to the beginning and resets the previously set filter | Working with Optimization Results |
| <u>FrameInputs</u> | Receives <u>input parameters</u> , on which the frame is formed | Working with Optimization Results |
| <u>FrameNext</u> | Reads a frame and moves the pointer to the next one | Working with Optimization Results |
| <u>GetLastError</u> | Returns the last error | <u>Checkup</u> |
| GetPointer | Returns the object pointer | Common Functions |

| Function | Action | Section |
|------------------------------|--|--|
| <u>GetTickCount</u> | Returns the number of milliseconds that have elapsed since the system was started | Common Functions |
| <u>GlobalVariableCheck</u> | Checks the existence of a global variable with the specified name | Global Variables of the Terminal |
| <u>GlobalVariableDel</u> | Deletes a global variable | Global Variables of the Terminal |
| <u>GlobalVariableGet</u> | Returns the value of a global variable | Global Variables of the Terminal |
| <u>GlobalVariableName</u> | Returns the name of a global variable by its ordinal number in the list of global variables | Global Variables of the Terminal |
| GlobalVariablesDeleteAll | Deletes global variables with the specified prefix in their names | Global Variables of the Terminal |
| <u>GlobalVariableSet</u> | Sets the new value to a global variable | Global Variables of the Terminal |
| GlobalVariableSetOnCondition | Sets the new value of the existing global variable by condition | Global Variables of the Terminal |
| <u>GlobalVariablesFlush</u> | Forcibly saves contents of all global variables to a disk | Global Variables of the Terminal |
| <u>GlobalVariablesTotal</u> | Returns the total number of global variables | Global Variables of the Terminal |
| <u>GlobalVariableTemp</u> | Sets the new value to a global variable, that exists only in the current session of the terminal | Global Variables of the Terminal |
| <u>GlobalVariableTime</u> | Returns time of the last accessing the global variable | Global Variables of the Terminal |
| <u>HistoryDealGetDouble</u> | Returns the requested property of a deal in the history (double) | Trade Functions |
| <u>HistoryDealGetInteger</u> | Returns the requested property of a deal in the history (datetime or int) | Trade Functions |
| <u>HistoryDealGetString</u> | Returns the requested property of a deal in the history (string) | Trade Functions |

| Function | Action | Section |
|--------------------------------|---|---|
| <u>HistoryDealGetTicket</u> | Returns a ticket of a corresponding deal in the history | Trade Functions |
| HistoryDealSelect | Selects a deal in the history for further calling it through appropriate functions | Trade Functions |
| <u>HistoryDealsTotal</u> | Returns the number of deals in the history | Trade Functions |
| HistoryOrderGetDouble | Returns the requested property of an order in the history (double) | Trade Functions |
| <u>HistoryOrderGetInteger</u> | Returns the requested property of an order in the history (datetime or int) | Trade Functions |
| HistoryOrderGetString | Returns the requested property of an order in the history (string) | Trade Functions |
| <u>HistoryOrderGetTicket</u> | Return order ticket of a corresponding order in the history | Trade Functions |
| <u>HistoryOrderSelect</u> | Selects an order in the history for further working with it | Trade Functions |
| <u>HistoryOrdersTotal</u> | Returns the number of orders in the history | Trade Functions |
| <u>HistorySelect</u> | Retrieves the history of transactions and orders for the specified period of the server time | |
| <u>HistorySelectByPosition</u> | Requests the history of deals with a specified <u>position</u> <u>identifier</u> . | Trade Functions |
| <u>iBars</u> | Returns the number of bars of a corresponding symbol and period, available in history | |
| <u>iBarShift</u> | Returns the index of the bar corresponding to the specified time | Timeseries and Indicators Access |
| iClose | Returns the Close price of the bar (indicated by the 'shift' parameter) on the corresponding chart | Timeseries and Indicators Access |
| <u>iHigh</u> | Returns the High price of the bar (indicated by the 'shift' parameter) on the corresponding chart | Timeseries and Indicators Access |

| Function | Action | Section |
|--------------------|--|---|
| <u>iHighest</u> | Returns the index of the highest value found on the corresponding chart (shift relative to the current bar) | Timeseries and Indicators Access |
| iLow | Returns the Low price of the bar (indicated by the 'shift' parameter) on the corresponding chart | Timeseries and Indicators Access |
| <u>iLowest</u> | Returns the index of the smallest value found on the corresponding chart (shift relative to the current bar) | Timeseries and Indicators Access |
| <u>iOpen</u> | Returns the Open price of the bar (indicated by the 'shift' parameter) on the corresponding chart | Timeseries and Indicators Access |
| <u>iTime</u> | Returns the opening time of the bar (indicated by the 'shift' parameter) on the corresponding chart | Timeseries and Indicators Access |
| <u>iTickVolume</u> | Returns the tick volume of the bar (indicated by the 'shift' parameter) on the corresponding chart | Timeseries and Indicators Access |
| <u>iRealVolume</u> | Returns the real volume of the bar (indicated by the 'shift' parameter) on the corresponding chart | Timeseries and Indicators Access |
| <u>iVolume</u> | Returns the tick volume of the bar (indicated by the 'shift' parameter) on the corresponding chart | Timeseries and Indicators Access |
| <u>iSpread</u> | Returns the spread value of the bar (indicated by the 'shift' parameter) on the corresponding chart | Timeseries and Indicators Access |
| iAD | Accumulation/Distribution | Technical Indicators |
| iADX | Average Directional Index | Technical Indicators |
| <u>iADXWilder</u> | Average Directional Index by Welles Wilder | Technical Indicators |
| iAlligator | Alligator | Technical Indicators |
| iAMA | Adaptive Moving Average | Technical Indicators |
| <u>iAO</u> | Awesome Oscillator | Technical Indicators |

| Function | Action | Section |
|------------------------|---|----------------------------------|
| iATR | Average True Range | Technical Indicators |
| <u>iBands</u> | Bollinger Bands® | Technical Indicators |
| <u>iBearsPower</u> | Bears Power | Technical Indicators |
| <u>iBullsPower</u> | Bulls Power | Technical Indicators |
| iBWMFI | Market Facilitation Index by Bill Williams | Technical Indicators |
| iCCI | Commodity Channel Index | Technical Indicators |
| i <u>Chaikin</u> | Chaikin Oscillator | Technical Indicators |
| iCustom | Custom indicator | Technical Indicators |
| iDEMA | Double Exponential Moving Average | Technical Indicators |
| i <u>DeMarker</u> | DeMarker | Technical Indicators |
| <u>iEnvelopes</u> | Envelopes | Technical Indicators |
| <u>iForce</u> | Force Index | Technical Indicators |
| <u>iFractals</u> | Fractals | Technical Indicators |
| <u>iFrAMA</u> | Fractal Adaptive Moving Average | Technical Indicators |
| iGator | Gator Oscillator | Technical Indicators |
| ilchimoku | Ichimoku Kinko Hyo | Technical Indicators |
| i <u>MA</u> | Moving Average | Technical Indicators |
| iMACD | Moving Averages Convergence-Divergence | Technical Indicators |
| <u>iMFI</u> | Money Flow Index | Technical Indicators |
| <u>iMomentum</u> | Momentum | Technical Indicators |
| <u>IndicatorCreate</u> | Returns the handle to the specified technical indicator created by an array of MqlParam type parameters | Timeseries and Indicators Access |

| Function | Action | Section |
|----------------------------|---|---|
| <u>IndicatorParameters</u> | Based on the specified handle, returns the number of input parameters of the indicator, as well as the values and types of the parameters | Timeseries and Indicators Access |
| <u>IndicatorRelease</u> | Removes an indicator handle and releases the calculation block of the indicator, if it's not used by anyone else | Timeseries and Indicators Access |
| <u>IndicatorSetDouble</u> | Sets the value of an indicator property of the <u>double</u> type | Custom Indicators |
| <u>IndicatorSetInteger</u> | Sets the value of an indicator property of the <u>int</u> type | Custom Indicators |
| IndicatorSetString | Sets the value of an indicator property of the string type | Custom Indicators |
| IntegerToString | Converting int into a string of preset length | Conversion Functions |
| iOBV | On Balance Volume | Technical Indicators |
| <u>iOsMA</u> | Moving Average of Oscillator (MACD histogram) | Technical Indicators |
| iRSI | Relative Strength Index | Technical Indicators |
| iRVI | Relative Vigor Index | Technical Indicators |
| iSAR | Parabolic Stop And Reverse System | Technical Indicators |
| <u>IsStopped</u> | Returns true, if an mql5 program has been commanded to stop its operation | Checkup |
| <u>iStdDev</u> | Standard Deviation | Technical Indicators |
| <u>iStochastic</u> | Stochastic Oscillator | Technical Indicators |
| <u>iTEMA</u> | Triple Exponential Moving Average | Technical Indicators |
| iTriX | Triple Exponential Moving Averages Oscillator | Technical Indicators |
| iVIDyA | Variable Index Dynamic Average | Technical Indicators |
| iVolumes | Volumes | Technical Indicators |
| iWPR | Williams' Percent Range | Technical Indicators |

| Function | Action | Section |
|--------------------------|--|-------------------|
| log | Returns natural logarithm | Math Functions |
| <u>log10</u> | Returns the logarithm of a number by base 10 | Math Functions |
| <u>MarketBookAdd</u> | Provides opening of Depth of Market for a selected symbol, and subscribes for receiving notifications of the DOM changes | Market Info |
| <u>MarketBookGet</u> | Returns a structure array MqlBookInfo containing records of the Depth of Market of a specified symbol | Market Info |
| <u>MarketBookRelease</u> | Provides closing of Depth of Market for a selected symbol, and cancels the subscription for receiving notifications of the DOM changes | Market Info |
| <u>MathAbs</u> | Returns absolute value (modulus) of the specified numeric value | |
| <u>MathArccos</u> | Returns the arc cosine of \boldsymbol{x} in radians | Math Functions |
| <u>MathArcsin</u> | Returns the arc sine of \boldsymbol{x} in radians | Math Functions |
| <u>MathArctan</u> | Returns the arc tangent of x in radians | Math Functions |
| <u>MathCeil</u> | Returns integer numeric value closest from above | Math Functions |
| <u>MathCos</u> | Returns the cosine of a number | Math Functions |
| <u>MathExp</u> | Returns exponent of a number | Math Functions |
| <u>MathFloor</u> | Returns integer numeric value closest from below | Math Functions |
| <u>MathlsValidNumber</u> | Checks the correctness of a real number | Math Functions |
| MathLog | Returns natural logarithm | Math Functions |
| MathLog10 | Returns the logarithm of a number by base 10 | Math Functions |
| <u>MathMax</u> | Returns the maximal value of the two numeric values | Math Functions |
| <u>MathMin</u> | Returns the minimal value of the two numeric values | Math Functions |

| Function | Action | Section |
|-------------------------|---|--------------------------|
| <u>MathMod</u> | Returns the real remainder after the division of two numbers | |
| <u>MathPow</u> | Raises the base to the specified power | Math Functions |
| <u>MathRand</u> | Returns a pseudorandom value within the range of 0 to 32767 | Math Functions |
| <u>MathRound</u> | Rounds of a value to the nearest integer | Math Functions |
| <u>MathSin</u> | Returns the sine of a number | Math Functions |
| <u>MathSqrt</u> | Returns a square root | Math Functions |
| <u>MathSrand</u> | Sets the starting point for generating a series of pseudorandom integers | |
| <u>MathTan</u> | Returns the tangent of a number | Math Functions |
| <u>MessageBox</u> | Creates, displays a message box and manages it | Common Functions |
| <u>MQLInfoInteger</u> | Returns an integer value of a corresponding property of a running mql5 program | Checkup |
| <u>MQLInfoString</u> | Returns a string value of a corresponding property of a running mql5 program | Checkup |
| MT5Initialize | Establish a connection with the MetaTrader 5 terminal | MetaTrader for Python |
| MT5Shutdown | Close the previously established connection to the MetaTrader 5 terminal | MetaTrader for Python |
| MT5TerminalInfo | Get status and parameters of the connected MetaTrader 5 terminal | MetaTrader for Python |
| MT5Version | Return the MetaTrader 5 terminal version | MetaTrader for Python |
| <u>MT5CopyRatesFrom</u> | Get bars from the MetaTrader 5 terminal starting from the specified date | MetaTrader for Python |
| MT5CopyRatesFromPos | Get bars from the MetaTrader 5 terminal starting from the specified index | MetaTrader for Python |
| MT5CopyRatesRange | Get bars in the specified date range from the MetaTrader 5 terminal | MetaTrader for Python |

| Function | Action | Section |
|-----------------------------|--|--------------------------|
| MT5CopyTicksFrom | Get ticks from the MetaTrader 5 terminal starting from the specified date | |
| MT5CopyTicksRange | Get ticks for the specified date range from the MetaTrader 5 terminal | MetaTrader for Python |
| <u>NormalizeDouble</u> | Rounding of a floating point number to a specified accuracy | |
| <u>ObjectCreate</u> | Creates an object of the specified type in a specified chart | |
| <u>ObjectDelete</u> | Removes the object with the specified name from the specified chart (from the specified chart subwindow) | Object Functions |
| <u>ObjectFind</u> | Searches for an object with the specified ID by the name | Object Functions |
| <u>ObjectGetDouble</u> | Returns the double value of the corresponding object property | Object Functions |
| <u>ObjectGetInteger</u> | Returns the integer value of the corresponding object property | Object Functions |
| <u>ObjectGetString</u> | Returns the string value of the corresponding object property | _ |
| <u>ObjectGetTimeByValue</u> | Returns the time value for the specified object price value | |
| <u>ObjectGetValueByTime</u> | Returns the price value of an object for the specified time | Object Functions |
| <u>ObjectMove</u> | Changes the coordinates of the specified object anchor point | Object Functions |
| <u>ObjectName</u> | Returns the name of an object of the corresponding type in the specified chart (specified chart subwindow) | Object Functions |
| <u>ObjectsDeleteAll</u> | Removes all objects of the specified type from the specified chart (from the specified chart subwindow) | Object Functions |
| <u>ObjectSetDouble</u> | Sets the value of the corresponding object property | Object Functions |

| Function | Action | Section |
|-------------------------|--|---------------------|
| <u>ObjectSetInteger</u> | Sets the value of the corresponding object property | |
| <u>ObjectSetString</u> | Sets the value of the corresponding object property | |
| <u>ObjectsTotal</u> | Returns the number of objects of the specified type in the specified chart (specified chart subwindow) | Object Functions |
| <u>OnStart</u> | The function is called when the <u>Start</u> event occurs to perform actions set in the script | Event Handling |
| <u>Onlnit</u> | The function is called in indicators and EAs when the Init event occurs to initialize a launched MQL5 program | Event Handling |
| <u>OnDeinit</u> | The function is called in indicators and EAs when the <u>Deinit</u> event occurs to deinitialize a launched MQL5 program | Event Handling |
| <u>OnTick</u> | The function is called in EAs when the <u>NewTick</u> event occurs to handle a new quote | Event Handling |
| <u>OnCalculate</u> | The function is called in indicators when the <u>Calculate</u> event occurs to handle price data changes | Event Handling |
| <u>OnTimer</u> | The function is called in indicators and EAs during the Timer periodic event generated by the terminal at fixed time intervals | Event Handling |
| <u>OnTrade</u> | The function is called in EAs during the <u>Trade</u> event generated at the end of a trading operation on a trade server | Event Handling |
| OnTradeTransaction | The function is called in EAs when the <u>TradeTransaction</u> event occurs to process a trade request execution results | Event Handling |
| <u>OnBookEvent</u> | The function is called in EAs when the <u>BookEvent</u> event occurs to process changes in the market depth | Event Handling |

| Function | Action | Section |
|------------------------|---|--------------------|
| <u>OnChartEvent</u> | The function is called in indicators and EAs when the ChartEvent event occurs to process chart changes made by a user or an MQL5 program | Event Handling |
| <u>OnTester</u> | The function is called in EAs when the <u>Tester</u> event occurs to perform necessary actions after testing an EA on history data | Event Handling |
| <u>OnTesterInit</u> | The function is called in EAs when the <u>TesterInit</u> event occurs to perform necessary actions before optimization in the strategy tester | Event Handling |
| <u>OnTesterDeinit</u> | The function is called in EAs when the <u>TesterDeinit</u> event occurs after EA optimization in the strategy tester | Event Handling |
| <u>OnTesterPass</u> | The function is called in EAs when the <u>TesterPass</u> even occurs to handle an arrival of a new data frame during EA optimization in the strategy tester | Event Handling |
| <u>OrderCalcMargin</u> | Calculates the margin required for the specified order type, in the deposit currency | Trade Functions |
| <u>OrderCalcProfit</u> | Calculates the profit based on the parameters passed, in the deposit currency | |
| <u>OrderCheck</u> | Checks if there are enough funds to execute the required trade operation. | Trade Functions |
| <u>OrderGetDouble</u> | Returns the requested property of the order (double) | Trade Functions |
| <u>OrderGetInteger</u> | Returns the requested property of the order (datetime or int) | Trade Functions |
| <u>OrderGetString</u> | Returns the requested property of the order (string) | Trade Functions |
| <u>OrderGetTicket</u> | Return the ticket of a corresponding order | Trade Functions |
| <u>OrderSelect</u> | Selects a order for further working with it | Trade Functions |

| Function | Action | Section |
|----------------------------|--|-----------------------------------|
| <u>OrderSend</u> | Sends <u>trade requests</u> to a server | Trade Functions |
| <u>OrderSendAsync</u> | Asynchronously sends <u>trade</u> <u>requests</u> without waiting for the trade response of the trade server | Trade Functions |
| <u>OrdersTotal</u> | Returns the number of orders | Trade Functions |
| <u>ParameterGetRange</u> | Receives data on the values range and the change step for an <u>input variable</u> when optimizing an Expert Advisor in the Strategy Tester | Working with Optimization Results |
| <u>ParameterSetRange</u> | Specifies the use of <u>input</u> <u>variable</u> when optimizing an Expert Advisor in the Strategy Tester: value, change step, initial and final values | Working with Optimization Results |
| <u>Period</u> | Returns the current chart timeframe | <u>Checkup</u> |
| <u>PeriodSeconds</u> | Returns the number of seconds in the period | Common Functions |
| PlaySound | Plays a sound file | Common Functions |
| PlotIndexGetInteger | Returns the value of an indicator line property of the integer type | Custom Indicators |
| PlotIndexSetDouble | Sets the value of an indicator line property of the type double | |
| <u>PlotIndexSetInteger</u> | Sets the value of an indicator line property of the <u>int</u> type | Custom Indicators |
| PlotIndexSetString | Sets the value of an indicator line property of the string type | Custom Indicators |
| <u>Point</u> | Returns the point size of the current symbol in the quote currency | Checkup |
| <u>PositionGetDouble</u> | Returns the requested property of an open position (double) | Trade Functions |
| <u>PositionGetInteger</u> | Returns the requested property of an open position (datetime or int) | Trade Functions |
| PositionGetString | Returns the requested property of an open position (string) | Trade Functions |

| Function | Action | Section |
|-------------------------------|---|---------------------|
| <u>PositionGetSymbol</u> | Returns the symbol corresponding to the open position | |
| <u>PositionGetTicket</u> | Returns the ticket of the position with the specified index in the list of open positions | Trade Functions |
| <u>PositionSelect</u> | Chooses an open position for further working with it | Trade Functions |
| <u>PositionSelectByTicket</u> | Selects a position to work with by the ticket number specified in it | Trade Functions |
| <u>PositionsTotal</u> | Returns the number of open positions | Trade Functions |
| <u>pow</u> | Raises the base to the specified power | Math Functions |
| <u>Print</u> | Displays a message in the log | Common Functions |
| <u>PrintFormat</u> | Formats and prints the sets of symbols and values in a log file in accordance with a preset format | Common Functions |
| <u>rand</u> | Returns a pseudorandom value within the range of 0 to 32767 | Math Functions |
| ResetLastError | Sets the value of a predetermined variable <u>LastError</u> to zero | Common Functions |
| <u>ResourceCreate</u> | Creates an image resource based on a data set | Common Functions |
| <u>ResourceFree</u> | Deletes <u>dynamically created</u> <u>resource</u> (freeing the memory allocated for it) | Common Functions |
| ResourceReadImage | Reads data from the graphical resource <u>created by</u> ResourceCreate() function or saved in EX5 file during <u>compilation</u> | Common Functions |
| ResourceSave | Saves a resource into the specified file | Common Functions |
| round | Rounds of a value to the nearest integer | Math Functions |
| <u>SendFTP</u> | Sends a file at the address specified in the settings window of the "FTP" tab | Common Functions |

| Function | Action | Section |
|-----------------------------|---|---|
| <u>SendMail</u> | Sends an email at the address specified in the settings window of the "Email" tab | Common Functions |
| <u>SendNotification</u> | Sends push notifications to mobile terminals, whose MetaQuotes ID are specified in the "Notifications" tab | Common Functions |
| <u>SeriesInfoInteger</u> | Returns information about the state of historical data | Timeseries and Indicators Access |
| SetIndexBuffer | Binds the specified indicator buffer with one-dimensional dynamic <u>array</u> of the <u>double</u> type | |
| <u>ShortArrayToString</u> | Copying array part into a string | Conversion Functions |
| ShortToString | Converting symbol code (unicode) into one-symbol string | |
| <u>SignalBaseGetDouble</u> | Returns the value of double type property for selected signal | <u>Trade</u> <u>Signals</u> |
| <u>SignalBaseGetInteger</u> | Returns the value of integer type property for selected signal | <u>Trade</u> <u>Signals</u> |
| SignalBaseGetString | Returns the value of string type property for selected signal | <u>Trade</u> <u>Signals</u> |
| <u>SignalBaseSelect</u> | Selects a signal from signals, available in terminal for further working with it | <u>Trade</u> <u>Signals</u> |
| <u>SignalBaseTotal</u> | Returns the total amount of signals, available in terminal | Trade Signals |
| <u>SignalInfoGetDouble</u> | Returns the value of double type property of signal copy settings | Trade Signals |
| <u>SignalInfoGetInteger</u> | Returns the value of integer type property of signal copy settings | <u>Trade</u> <u>Signals</u> |
| SignalInfoGetString | Returns the value of string type property of signal copy settings | <u>Trade</u> <u>Signals</u> |
| <u>SignalInfoSetDouble</u> | Sets the value of double type property of signal copy settings | Trade Signals |
| <u>SignalInfoSetInteger</u> | Sets the value of integer type property of signal copy | <u>Trade</u> <u>Signals</u> |

| Function | Action | Section |
|-------------------------------|--|--------------------------------|
| | settings | |
| <u>SignalSubscribe</u> | Subscribes to the trading signal | <u>Trade</u> <u>Signals</u> |
| <u>SignalUnsubscribe</u> | Cancels subscription | <u>Trade</u> <u>Signals</u> |
| <u>sin</u> | Returns the sine of a number | Math Functions |
| <u>Sleep</u> | Suspends execution of the current Expert Advisor or script within a specified interval | |
| <u>SocketCreate</u> | Create a socket with specified flags and return its handle | |
| <u>SocketClose</u> | Close a socket | Network Functions |
| <u>SocketConnect</u> | Connect to the server with timeout control | Network Functions |
| SocketIsConnected | Checks if the socket is currently connected | Network Functions |
| <u>SocketIsReadable</u> | Get a number of bytes that can be read from a socket | Network Functions |
| <u>SocketIsWritable</u> | Check whether data can be written to a socket at the current time | Network Functions |
| <u>SocketTimeouts</u> | Set timeouts for receiving and sending data for a socket system object | |
| SocketRead | Read data from a socket | Network Functions |
| SocketSend | Write data to a socket | Network Functions |
| <u>SocketTlsHandshake</u> | Initiate secure TLS (SSL) connection to a specified host via TLS Handshake protocol | Network Functions |
| <u>SocketTlsCertificate</u> | Get data on the certificate used to secure network connection | Network Functions |
| <u>SocketTlsRead</u> | Read data from secure TLS connection | Network Functions |
| <u>SocketTlsReadAvailable</u> | Read all available data from secure TLS connection | Network Functions |
| <u>SocketTlsSend</u> | Send data via secure TLS connection | Network Functions |

| Function | Action | Section |
|---------------------------|---|------------------------|
| <u>sqrt</u> | Returns a square root | Math Functions |
| <u>srand</u> | Sets the starting point for generating a series of pseudorandom integers | |
| <u>StringAdd</u> | Adds a string to the end of another string | String Functions |
| <u>StringBufferLen</u> | Returns the size of buffer allocated for the string | String Functions |
| <u>StringCompare</u> | Compares two strings and returns 1 if the first string is greater than the second; 0 - if the strings are equal; -1 (minus 1) - if the first string is less than the second one | String Functions |
| <u>StringConcatenate</u> | Forms a string of parameters passed | String Functions |
| <u>StringFill</u> | Fills out a specified string by selected symbols | String Functions |
| <u>StringFind</u> | Search for a substring in a string | String Functions |
| <u>StringFormat</u> | Converting number into string according to preset format | |
| <u>StringGetCharacter</u> | Returns the value of a number located in the specified string position | String Functions |
| StringInit | Initializes string by specified symbols and provides the specified string length | |
| StringLen | Returns the number of symbols in a string | String Functions |
| <u>StringReplace</u> | Replaces all the found substrings of a string by a set sequence of symbols | String Functions |
| <u>StringSetCharacter</u> | Returns a copy of a string with a changed value of a symbol in a specified position | String Functions |
| <u>StringSplit</u> | Gets substrings by a specified separator from the specified string, returns the number of substrings obtained | String Functions |
| <u>StringSubstr</u> | Extracts a substring from a text string starting from a specified position | String Functions |
| <u>StringToCharArray</u> | Symbol-wise copying a string converted from Unicode to | Conversion Function |

| Function | Action | Section |
|-------------------------------|---|-------------------------|
| | ANSI, to a selected place of array of uchar type | |
| <u>StringToColor</u> | Converting "R,G,B" string or string with color name into color type value | Conversion Functions |
| <u>StringToDouble</u> | Converting a string containing a symbol representation of number into number of double type | |
| <u>StringToInteger</u> | Converting a string containing a symbol representation of number into number of int type | Conversion Functions |
| <u>StringToLower</u> | Transforms all symbols of a selected string to lowercase | String Functions |
| <u>StringToShortArray</u> | Symbol-wise copying a string to a selected part of array of ushort type | |
| <u>StringToTime</u> | Converting a string containing time or date in "yyyy.mm.dd [hh:mi]" format into datetime type | Conversion Functions |
| <u>StringToUpper</u> | Transforms all symbols of a selected string into capitals | String Functions |
| <u>StringTrimLeft</u> | Cuts line feed characters, spaces and tabs in the left part of the string | String Functions |
| <u>StringTrimRight</u> | Cuts line feed characters, spaces and tabs in the right part of the string | String Functions |
| <u>StructToTime</u> | Converts a variable of MqlDateTime structure type into a datetime value | |
| Symbol | Returns the name of a symbol of the current chart | <u>Checkup</u> |
| <u>SymbolInfoDouble</u> | Returns the double value of the symbol for the corresponding property | Market Info |
| SymbolInfoInteger | Returns a value of an integer type (long, datetime, int or bool) of a specified symbol for the corresponding property | Market Info |
| <u>SymbolInfoMarginRate</u> | Returns the margin rates depending on the order type and direction | Market Info |
| <u>SymbolInfoSessionQuote</u> | Allows receiving time of beginning and end of the specified quoting sessions for | Market Info |

| Function | Action | Section |
|-------------------------------|--|---------------------|
| | a specified symbol and day of week. | |
| <u>SymbolInfoSessionTrade</u> | Allows receiving time of beginning and end of the specified trading sessions for a specified symbol and day of week. | Market Info |
| SymbolInfoString | Returns a value of the string type of a specified symbol for the corresponding property | Market Info |
| <u>SymbolInfoTick</u> | Returns the current prices for the specified symbol in a variable of the <u>MqlTick</u> type | Market Info |
| SymbolisSynchronized | Checks whether data of a selected symbol in the terminal are synchronized with data on the trade server | Market Info |
| <u>SymbolName</u> | Returns the name of a specified symbol | Market Info |
| <u>SymbolSelect</u> | Selects a symbol in the Market Watch window or removes a symbol from the window | Market Info |
| <u>SymbolsTotal</u> | Returns the number of available (selected in Market Watch or all) symbols | <u>Market Info</u> |
| <u>tan</u> | Returns the tangent of a number | Math Functions |
| <u>TerminalClose</u> | Commands the terminal to complete operation | Common Functions |
| <u>TerminalInfoDouble</u> | Returns an double value of a corresponding property of the mql5 program environment | <u>Checkup</u> |
| <u>TerminalInfoInteger</u> | Returns an integer value of a corresponding property of the mql5 program environment | <u>Checkup</u> |
| <u>TerminalInfoString</u> | Returns a string value of a corresponding property of the mql5 program environment | <u>Checkup</u> |
| <u>TesterStatistics</u> | It returns the value of a specified statistic calculated based on testing results | Common Functions |
| <u>TextGetSize</u> | Returns the string's width and height at the current font settings | |

| Function | Action | Section |
|----------------------------|---|--------------------------------|
| <u>TextOut</u> | Transfers the text to the custom array (buffer) designed for creation of a graphical resource | <u>Object</u> |
| <u>TextSetFont</u> | Sets the font for displaying the text using drawing methods (Arial 20 used by default) | |
| <u>TimeCurrent</u> | Returns the last known server time (time of the last quote receipt) in the datetime format | <u>Date and</u> <u>Time</u> |
| <u>TimeDaylightSavings</u> | Returns the sign of Daylight Saving Time switch | Date and Time |
| TimeGMT | Returns GMT in datetime format with the Daylight Saving Time by local time of the computer, where the client terminal is running | <u>Date and</u> <u>Time</u> |
| TimeGMTOffset | Returns the current difference between GMT time and the local computer time in seconds, taking into account DST switch | <u>Date and</u> <u>Time</u> |
| <u>TimeLocal</u> | Returns the local computer time in datetime format | Date and Time |
| TimeToString | Converting a value containing time in seconds elapsed since 01.01.1970 into a string of "yyyy.mm.dd hh:mi" format | Conversion Functions |
| <u>TimeToStruct</u> | Converts a datetime value into a variable of MqlDateTime structure type | Date and Time |
| <u>TimeTradeServer</u> | Returns the current calculation time of the trade server | Date and Time |
| <u>UninitializeReason</u> | Returns the code of the reason for deinitialization | <u>Checkup</u> |
| <u>WebRequest</u> | Sends HTTP request to the specified server | Common Functions |
| <u>ZeroMemory</u> | Resets a variable passed to it by reference. The variable can be of any type, except for classes and structures that have constructors. | Common Functions |
